

GT - 5 SERIES

BALANCE DOOR

ADVANTAGES

1. The opening power of the door is only about half that of the ordinary manual door, especially in windy situations. Compared with the [hardware series] products produced by Nabco, the easy-to-push performance is more obvious.
2. The balance door can replace the bullet door. The door can be located after opening 90 degrees, which is more convenient when evacuating crowds.
3. The opening track of the door is round, and the door will not take up a lot of space when opened.
4. The structure is safe, and the risk of door fan dumping and injury caused by the ground falling is significantly reduced.
5. The door body is freely assembled and can be installed independently as the entrance of the building, and can also be used in conjunction with the automatic door.
6. The surface decoration of the door is diversified, which can meet the requirements of different customers.
7. There is no need to groove on the ground, and the on-site construction is relatively simple.

GT-Z BALANCE DOOR

Model	Applicable door weight (kg)	Door width (mm) Single open	Door width (mm) Double open	The highest door (mm)	Minimum door (mm)
GT-Z5150	150	1100	2200	3000	760
